

# Optimized logistics processes with EDI

Automate processes, save money, increase service quality!

Whether it's about the provision of electronic information or physical goods: logistics processes play a major role in the value chain involving several companies and increase its efficiency. Independently of the industry where logistics service providers operate, their guiding principle will always be "time is money."

In order to deliver the right goods at the right time to the right location, many pieces of information need to be processed and exchanged with business partners swiftly and efficiently. Several factors come into play, including cost efficiency, quick response times and flexibility regarding technical requirements.

The harmonization of this data exchange via EDI (Electronic Data Interchange) translates into a high degree of simplification. A standardized "language" (or data formats) used on a uniform communication platform (eXite® EDI Communication) ensures smooth integration processes between logistics service providers and their partners.

## Benefits from EDI-supported processes

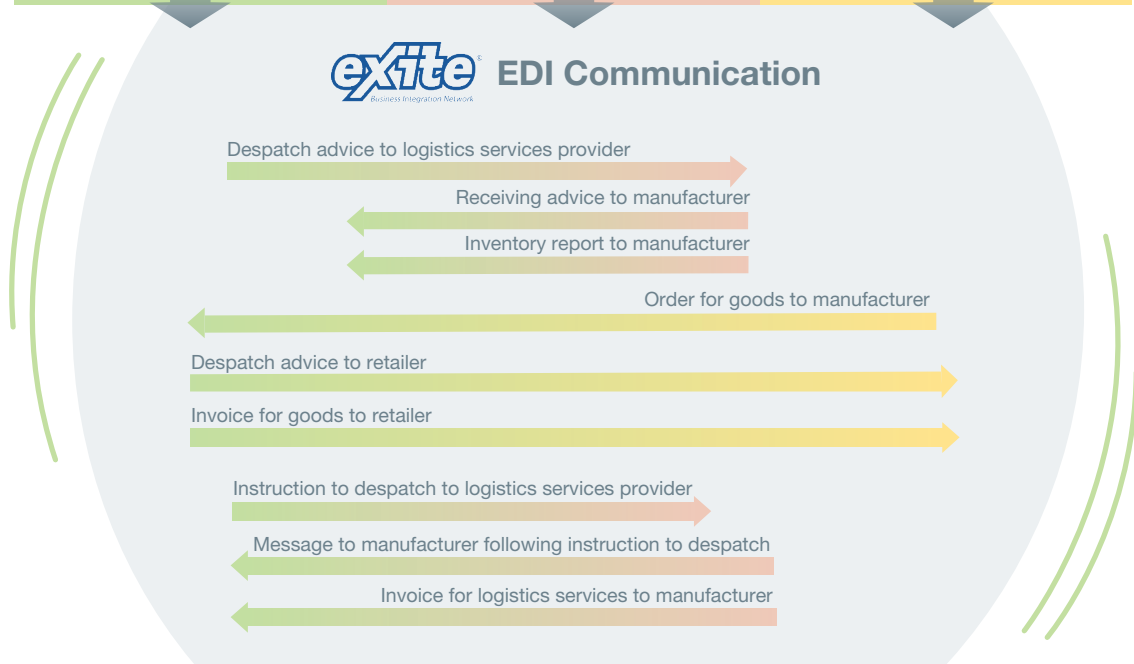

- › High level of process automation
- › Eliminates manual data entry and resulting errors (delivery orders, inventory reports, etc.)
- › Shorter response times for client orders
- › Allows for long-term planning

## Your EDITEL contact

We will be happy to assist you regarding customized EDI solutions for logistics:

Mag. Klaus Schaffer
